**Graduate Students:**

- Graduate student space- availability is low
- Information regarding thesis supervisors, semester plan and checklist, stronger orientation
- Updated website with faculty supervisors available each year, support with securing supervisors
- Financial stability/ secure funding- Should be guaranteed some sort of TAship, knowledge of number available further in advance, more reliable, more timely awarding
- Mentorship program works really well but needs more presence. Put information on website, mentor profiles, etc.
- Create a more prominent research culture, pride
- Faculty of Graduate Studies- could streamline information that's provided to incoming students
- Research Assistantships are important- offer opportunities to publish outside of your discipline, important component to be able to publish outside of thesis, sense of contribution
- Research outreach important in some programs- having information available for who to get in touch with
- Require less teaching time for faculty who are supervising
